DC-2300

SN-DC2300_New MS certified driver_006_EN

New MS certified Windows Driver Version 1.113.0.0

A new **Driver version 1.113.0.0** for the **DC-2300** is available. This new driver includes several improvements and bug fixes.

The driver is backward compatible with DC-2300 printers with UCL levels 0 to 3.
The UCL level is indicated on the rating label located on the bottom of the printer.

For DC-2300 printers with UCL level 4 or higher it is mandatory to use the driver 1.113.0.0 and firmware 30.05.00.00 together!

The new Driver has additional functions and solves the below issues:

- Added support for network-based UDP search and read operations via ports 9100 and 1901, ensuring backward and forward compatibility between firmware versions.
- In combination with the new firmware, bidirectional communication for printer data and job/status control is handled exclusively via port 9100. Secured printing and control of printer via standard port 9100. As a result, administrators do not need to open any additional network ports, thereby enhancing network security.
- Improved installation routine.
- Service menu: Implemented motor and sensor test functions.

We recommend to upgrade DC-2300 printers with lower driver and firmware releases.
