New Windows Driver Version V 2.135.0.0

A new **Driver V2.135.0.0** for the **DC-8600/PRO** is available. This driver includes several improvements and bug fixes compared to previous versions.

The driver **must** be used with the **Firmware version 50.00.00.07** and higher. To take advantage of these features, the DC-8600 printer must have firmware version 50.00.00.07 or higher installed.

So, it is mandatory to use the driver V2.135.0.0 and firmware version 50.00.00.07 or higher revision release together!

The following improvements and bugfixes are available with the driver and the new Firmware:

- The driver is now Microsoft certified
- Added support for system board Wi-Fi settings.
- The driver is now using only Port 9100 for better compatibility
- Enhanced the driver's network printer search functionality

We recommend to upgrade DC-8600 printers with lower driver and firmware releases.
